09.14.2016 - Amniotic Fluid Therapy

- AmnioFlo is a unique human tissue allograft that is derived from amniotic fluid.
- Amniotic fluid is the liquid contained within the amniotic sac during pregnancy, which protects, cushions, and enhances the mobility of the fetus. It is not derived from the embryo itself.
- Amnioflo contain no steroids. Instead, the injections rely on **naturally occurring anti-inflammatory agents**, such as cytokines.
- Amniotic stem cells contain **hyaluronic acid**, which lubricates cartilage and promotes new cartilage growth.
- Amniotic stem cells contain **growth factors**, which stimulate tissue growth.
- Amnioflo also includes **carbohydrates, proteins, lipids, and electrolytes**.
- With AmnioFlo, there is **no threat of patient rejection**.
- AmnioFlo is provided in a lyophilized form and is intended for homologous use to protect, cushion, and lubricate the joint into which it is injected.
- This therapy can be used for hip pain, knee pain, shoulder pain, and arthritis, as well as refractory tendonitis and tendinopathies
